

No. 01

The 7-Day Cycle *Reset.*

*A soft protocol for high-functioning women who've
outgrown every planner.*

A SOFT PROTOCOL

— A NOTE FROM MIA • NO. 01

You didn't come here *because you lack discipline.*

You came here because every system you've tried was built for a different brain — one that runs on linear momentum, consistent energy, and a body that cooperates on cue.

Yours doesn't work that way. Neither does mine.

This is seven days of paying attention. Not optimization. Not a challenge. A calibrated window in which you begin to notice what your specific brain and body actually need — and start designing around that, rather than against it.

Read it slowly. Use what fits. Leave what doesn't.

”

It is not a system to be followed. It is seven days of attention — held honestly, in a brain that finally gets the room it needs.

FOCUS+ • FOCUS-PLUS.SPACE

— HOW TO READ THIS GUIDE

- 01 One day at a time.
Do not read ahead. Each day is designed as a single unit of attention.
-
- 02 Notion or paper — choose one.
Consistency of medium matters more than the medium itself.
-
- 03 The morning protocol is a ceiling, not a floor.
If you have ten minutes, use them. If you have three, use three.
-
- 04 The fallback option is not failure.
It is the protocol working exactly as intended.
-
- 05 You are observing, not performing.
Nothing here needs to be done correctly. It needs to be done honestly.
-

— WHY SEVEN DAYS

Most resets ask for thirty days. The commitment feels significant — which means most people stop by day four. Seven is different: long enough to catch a pattern, short enough to start today.

Whatever phase of your cycle you are in right now, a seven-day window will take you through at least one hormonal inflection point — a shift in energy, cognition, or capacity that you may have been labeling as inconsistency, but is actually *information*.

— THE SEVEN DAYS, IN ORDER

- | | | |
|---|---|---|
| 01 Notice
The baseline. | 02 Strip
One obligation removed. | 03 Single
The one that matters. |
| 04 Phase
Match work to biology. | 05 Buffer
Recovery is structural. | 06 Review
What actually worked. |
| 07 Design
Your baseline, your rule. | | |

OI

Notice

Before anything else: where are you right now?

Take 60 seconds. Do not edit your answer.

What is the actual state of my brain today — not what I wish it were, but what it is?

Write one sentence. Or three words. Or a number from 1–10. Any format that captures something true.

MORNING PROTOCOL • 10 MINUTES MAX

- 01 **Check your data.** If you wear an Oura or Whoop, look at your readiness or recovery score before you look at your calendar. Note it somewhere visible.
- 02 **Name your phase.** Do you know where you are in your cycle today? Estimate if you are unsure. The four phases — menstrual, follicular, ovulatory, luteal — carry distinct cognitive and energy signatures. Even a rough estimate is more useful than no estimate.
- 03 **Set one intention for the day.** Not a task list. One sentence beginning with "Today I want to feel..." or "Today the most important thing is..."

— MIDDAY CHECK

Is what I am doing right now the highest-value use of my current energy level?

If yes, continue. If no, adjust without self-criticism.

— EVENING CLOSE-OUT

What did I notice about my energy today — when was it available, and when did it disappear?

Did I spend it on the right things?

If today is hard. Write the date and the word "noticed." That is enough.

02

Strip

We add before we subtract. Always.

We add before we subtract. Always. This is the day to subtract.

What is one thing on my plate right now that I agreed to from obligation, momentum, or someone else's urgency — not from my own priorities?

One thing. Write it down.

MORNING PROTOCOL • 10 MINUTES MAX

- 01 **Review yesterday's energy note.** One sentence about what it tells you.
- 02 **Identify the one thing to remove.** From the setup question above: can you delegate it, defer it, or decline it today? You do not need to act on this yet — you need to name it clearly.
- 03 **Clear one physical surface.** Desk, kitchen counter, one tab in your browser. The external environment is not separate from executive function. It is part of it.

— MIDDAY CHECK

Am I doing anything right now that belongs to someone else's agenda?

— EVENING CLOSE-OUT

What did I not do today that I expected myself to do — and was the expectation actually mine?

What would it feel like to carry five fewer commitments next week?

If today is hard. Do only the physical surface. Clear one thing you can see.

03

Single

Not the most urgent. Not the most overdue.

Not the most urgent. Not the most overdue. The one that, if done, would make the rest feel lighter.

If I could only move one thing forward today, what would it be?

MORNING PROTOCOL • 10 MINUTES MAX

- 01 **Write the single priority at the top of your page.** Before your task list, your messages, your calendar. Before anything else.
- 02 **Estimate the time honestly.** Not how long it should take. How long it will actually take, given the brain you have today.
- 03 **Block the first available 90-minute window.** That window belongs to the single priority. Everything else waits.

— MIDDAY CHECK

Have I protected the priority, or have I let the urgent displace the important?

— EVENING CLOSE-OUT

Did I do the single priority — and if not, what interrupted it?

What would I need to change tomorrow so it doesn't happen again?

If today is hard. Write the single priority on a piece of paper and put it where you will see it when you sit down. That act of naming is not nothing.

04

Phase

Your cognitive capacity is not fixed. It shifts.

Your cognitive capacity is not fixed. It shifts — predictably — across your cycle. Estrogen rising in the follicular phase sharpens verbal reasoning and risk tolerance. Progesterone in the luteal phase narrows focus and reduces appetite for novelty. Neither is better. Both are useful. The error is scheduling against them.

What does my current phase ask of me — and what am I asking of it instead?

MORNING PROTOCOL • 10 MINUTES MAX

- 01 **Re-confirm your phase.** Follicular (days 6–13), ovulatory (days 14–17), luteal (days 18–28), menstrual (days 1–5). Rough estimates are fine.
- 02 **Match one task to your phase.** High-collaboration work, pitching, and visible output tend to feel easier in follicular and ovulatory phases. Deep solo work, editing, and analytical tasks tend to sit better in luteal. Rest and low-input days belong to menstrual. Choose one task today that your phase actually supports.
- 03 **Note one task you are forcing against your phase.** You do not have to move it. Just notice the friction.

— MIDDAY CHECK

Is the resistance I am feeling right now a signal about the task — or about my timing?

— EVENING CLOSE-OUT

Where did I feel most capable today, and what was I doing?

What would I schedule differently if I designed next week around my phase?

If today is hard. Write your phase at the top of the page and give yourself permission to work only within it today.

05

Buffer

High function does not run without recovery.

High function does not run without recovery. It requires it. The absence of deliberate recovery is not efficiency — it is a slow accumulation of deficit that surfaces as irritability, poor decisions, and the sense that you are behind even when you are not.

Where in my current week is recovery built in — and where have I quietly removed it to make room for more output?

MORNING PROTOCOL • 10 MINUTES MAX

- 01 **Open your calendar for the next seven days.** Find the white space. If there is none, that is the finding.
- 02 **Block one recovery unit today.** Minimum 20 minutes. Non-negotiable, non-productive, non-social. A walk without a podcast. Lying down without a screen. Sitting with a cup of something.
- 03 **Identify one recurring drain.** A meeting, a communication thread, a commitment that costs more than it returns. You do not need to remove it today. You need to see it.

— MIDDAY CHECK

How is my energy right now compared to this morning — and what has the difference cost me?

— EVENING CLOSE-OUT

Did I take the recovery unit I scheduled — and if not, what story did I tell myself to justify skipping it?

What does consistent recovery look like for the brain I actually have?

If today is hard. The 20-minute block is the only task today. Everything else is optional.

06

Review

Not what you planned. What actually happened.

Not what you planned. What actually happened.

Looking at this past week: what worked — not what should have worked, but what demonstrably did?

MORNING PROTOCOL • 10 MINUTES MAX

- 01 **Go back through days 1–5.** Read your own notes. Do not judge them. Look for patterns.
- 02 **Write two things that worked.** Specific, observable things. *"I did the single priority on day three and felt less scattered by noon"* is useful. *"I tried harder"* is not.
- 03 **Write one thing that did not work.** One. And write the structural reason — not the character reason. Not *"I have no willpower"* but *"I scheduled the hard task after three meetings and had nothing left."*

— MIDDAY CHECK

Is there a pattern I have been ignoring that this week has made visible?

— EVENING CLOSE-OUT

What would I tell a friend who described my week to me? What would I notice about it from the outside?

What is the one structural change that would make the most difference to next week?

If today is hard. Write only what worked. One thing. That is a complete review.

07

Design

A calibration. Not a return to zero.

This is not a reset that returns you to zero. It is a calibration that gives you a new starting point — one built on seven days of your own data rather than a system designed for someone else.

Based on what I now know about this week, what does my baseline actually look like — and what would I build on top of it?

MORNING PROTOCOL • 10 MINUTES MAX

- 01 **Write your personal baseline.** Three to five sentences. What your brain needs. When your best hours are. What drains you faster than it should. What phase you are in and what that means for the week ahead.
- 02 **Design one structural rule.** Not a habit, not a goal — a rule. Something you will stop negotiating with yourself about. *"I do not schedule calls before 10am." "Tuesday afternoons are protected for deep work." "I review my single priority before I open my inbox."* One rule, stated simply.
- 03 **Write down what you are building toward.** Not a vision board. One sentence. What matters to you right now, in the next 30 days.

— MIDDAY CHECK

Does what I am doing right now connect to what I wrote this morning?

— EVENING CLOSE-OUT

What do I know about myself now that I did not name seven days ago?

What does this brain need in order to do its best work — and am I willing to design for that?

If today is hard. Write the one structural rule. Just the rule. Carry it forward.

— WHAT NOW

Seven days of *your own data*.

Most people operate on assumption and fatigue. You now have something more specific.

The 7-Day Cycle Reset is the entry point to a larger system.

FOCUS+ is a Notion-based operating system built for exactly the brain you have been working with this week: high-functioning, cycle-aware, ADHD-configured, and done with planners that require you to be someone else.

-
- 01 Daily templates calibrated to all four cycle phases.
Morning protocol, day structure, evening close — with an "if the day is hard" fallback baked into each.
 - 02 Executive function support built into every layer.
Task paralysis fallbacks. Default decisions made in advance. The 47 tabs problem, addressed by design.
 - 03 A hormone-aware habit tracker.
Reads your data rather than demanding consistency regardless of biology.
 - 04 AI Prompt Vault — 50 calibrated prompts.
Designed for the specific cognitive states that come with ADHD and cycle fluctuation.
 - 05 A 12-minute onboarding film.
Walks you through the full configuration. You're inside the system the same day you buy it.
-

It is designed to be the last productivity system you set up.

— THE FULL SYSTEM

Seven days is the opening. *The system is the rest.*

This protocol shows you the pattern. FOCUS+ Core is what you run once you can see it — four daily protocols, one per phase, in the Notion workspace you already use.
